

Aggreko to Power the NCAA's Men's Final Four Celebrations for the Eighth Consecutive Year

Houston, United States: Aggreko, the global leader in [rental power](#) and [temperature control solutions](#) and Official Supplier to the NCAA, will provide temporary power generation services for the eighth consecutive year to local festivities surrounding the NCAA Men's Final Four. The 2014 NCAA Division I Men's Basketball Championship national semi-finals and national championship will take place on April 5 and 7 at the AT&T Stadium in Arlington, TX.

Aggreko was chosen for its successful track record with the NCAA, in addition to its long-standing industry experience providing large-scale power generation solutions for high-profile sporting events. Utilizing its national network of service depots, Aggreko's previous successes include the 2013 America's Cup, the London 2012 Olympic and Paralympic Games, seven PGA Championships, and nine U.S. Open golf tournaments.

More than 10 miles of cable and 6 MW of electricity, enough to continuously power 600 average-size homes for one week, will be provided to ensure NCAA event celebrations run smoothly. Powering the Infiniti Tip-Off Tailgate at AT&T stadium and also the March Madness Music Festival and pep rally at Reunion Park required Aggreko to station a team of 12 technicians over the course of 16 days to manage the preparation, safe installation, and dismantling of equipment. Each performance stage will include Aggreko's environmentally-friendly Tier 4i generators, incorporating the latest engine technology available with 80% lower emission levels. Units range from 30 kW to 500 kW and will be monitored 24/7 via Aggreko's Remote Monitoring (ARM) service.

"With high-profile events such as the NCAA, it's important to understand how to successfully manage the numerous moving parts involved in powering events of this scale," said Gary Meador, Head of National Event Services, Aggreko North America. "Aggreko's years of experience and expertise in the energy management industry positioned us to most effectively work with other vendors and employees to safely accomplish this task."

Aggreko News Release

April 2, 2014

EDITOR'S NOTES

Aggreko plc is the world leader in the supply of temporary power and temperature control solutions. Aggreko employs over 6,000 people operating from 202 locations. In 2013 we served customers in about 100 countries, and had revenues of approximately GBP 1.6bn (USD 2.5bn or Euros 1.9bn). Aggreko plc is listed on the London Stock Exchange (AGK.L), is a member of the FTSE-100 index, and is headquartered in Scotland. For more information, please visit the company website at www.aggreko.com

Aggreko provides power and temperature control solutions to customers who need them either very quickly, or for a short or indeterminate length of time. Examples would be the supply of power to an industrial site which needs to service its permanent power supply, supplying a whole city in times of power shortage, or providing a major sporting event with power and cooling systems. We serve our customers either through our 202 service centres, which we call the Local business, or globally through our Power Projects business.

In the Local business, which accounts for about half of our revenues, we hire our equipment to customers, who then operate it for themselves, although we retain responsibility for servicing and maintaining it. In the Power Projects business, which also accounts for about half of our revenues, we operate as a power producer. We install and operate [power plants](#) and we charge our customers both for providing the generating capacity, and for the electricity we produce. We design and manufacture equipment specifically for these requirements in our factory in Dumbarton, Scotland.

Recent customers include the [London 2012 Olympic and Paralympic Games](#), the [Ryder Cup](#) and [Cirque du Soleil](#) and the power utilities in over 50 countries including the UK, France, Ivory Coast, Mozambique, Indonesia, Bangladesh, Argentina, Venezuela, Chile, Brazil and the USA.

In 2013 we fulfilled almost 48,000 customers' assignments and 72% of those who responded to our research gave us a recommendation of 9 or 10 out of 10.
