

## AGGREKO ROPES IN THE HOUSTON RODEO'S FAMOUS BARBEQUE COOK-OFF

**HOUSTON** – Feb. 27, 2015- Aggreko, the world leading provider of temporary power, heating and cooling solutions and air compressors, is providing temporary power for the Houston Rodeo cook-off, also known as the “World’s Championship Bar B-Que Contest.” The Texas-sized barbeque cook-off is held Feb. 25-28, 2015, in order to kick off Texas’ largest rodeo, the Houston Livestock Show & Rodeo.

The 2015 Rodeo Houston draws large crowds that attend three days of cooking competition. Aggreko will provide 5 MW of power to the cook-off team tents, stages and committee areas - enough utility to power more than 1,500 Texas homes. The event brings in a crowd of more than 200,000 rodeo fans that attend to sample the competing barbeque and sauces.

“We will be providing the Houston Livestock Rodeo’s cook-off with a custom-designed electrical platform,” said Rick Strole, business development specialist for Aggreko. “The installation will leverage approximately 170 distribution panels and more than 15 miles of cable.”

This is Aggreko’s fourth year powering the rodeo’s traditional Texas barbeque contest.

###

### EDITOR’S NOTES

Aggreko plc is the world leader in the supply of temporary power and temperature control solutions. Aggreko employs over 6,000 people operating from 202 locations. In 2013 we served customers in about 100 countries, and had revenues of approximately GBP 1.6bn (USD 2.5bn or Euros 1.9bn). Aggreko plc is listed on the London Stock Exchange (AGK.L), is a member of the FTSE-100 index, and is headquartered in Scotland. For more information, please visit the company website at [www.aggreko.com](http://www.aggreko.com) or local website: [www.us.aggreko.com](http://www.us.aggreko.com)

Aggreko provides power and temperature control solutions to customers who need them either very quickly, or for a short or indeterminate length of time. Examples would be the supply of power to an industrial site which needs to service its permanent power supply, supplying a whole city in times of power shortage, or providing a major sporting event with power and cooling systems. We serve our customers either through our 202 service centres, which we call the Local business, or globally through our Power Projects business.

In the Local business, which accounts for about half of our revenues, we hire our equipment to customers, who then operate it for themselves, although we retain responsibility for servicing and maintaining it. In the Power Projects business, which also accounts for about half of our revenues, we operate as a power producer. We install and operate [power plants](#) and we charge our customers both for providing the generating capacity, and for the electricity we produce. We design and manufacture equipment specifically for these requirements in our factory in Dumbarton, Scotland.

Recent customers include the [2014 FIFA World Cup Brazil™](#), the [Ryder Cup](#) and [Cirque du Soleil](#) and the power utilities in over 50 countries including the UK, France, Ivory Coast, Mozambique, Indonesia, Bangladesh, Argentina, Venezuela, Chile, Brazil and the USA.

In 2013 we fulfilled almost 48,000 customers’ assignments and 72% of those who responded to our research gave us a recommendation of 9 or 10 out of 10.
