

Aggreko, Global Leader in Temporary Power Generation, Opens New Service Centre in Quebec Area

Quebec City: Aggreko, a global leader in [temporary power generation](#), [temperature control](#) and [oil-free compressed air solutions](#), announced today the opening of a new service centre in Quebec City to meet the growing needs of commercial and industrial customers. Backed by a nationwide network of service centres, the 2,400 sq m. facility maintains the full complement of Aggreko's equipment and services, including local sales, service and support to more rapidly mobilise, install and operate projects of all sizes.

"Expanding Aggreko's service capabilities in Quebec demonstrates our commitment to delivering the utmost value through fast, safe and reliable temporary utility solutions," said Peter Brouwer, Vice President, Canada East Area General Manager, Aggreko North America. "This new facility is part of Aggreko's strategic expansion efforts to better serve customers throughout Canada, which will include process engineering and specialty cooling tower support for the petrochemical and manufacturing industries."

The Quebec facility will provide engineering services from Aggreko Process Services (APS): an experienced process engineering team that helps customers improve their processes and operations to enhance bottom-line performance and address environmental concerns. The centre will also provide support from Aggreko Cooling Tower Services (ACTS): a specialist team focused on improving cooling water performance and reliability through temporary cooling tower installations. Unique to the rental industry, the APS and ACTS teams can design and install projects at extremely short notice.

"We are also excited to provide our customers with Aggreko Remote Monitoring (ARM)," said Brouwer. "This service not only provides customers in remote areas with real-time asset monitoring, but also dedicated diagnostic support by Aggreko's technical experts located in our Remote Operations Center, proactively recognizing, diagnosing and resolving operational issues before they occur."

Aggreko will supply the area with all the company's major rental product lines, including:

- Diesel and natural gas [generators](#) from 30 kW to 1,500 kW
- Temperature-control equipment - chillers, cooling towers, air conditioners and electric heaters
- Oil-free air compressors, both diesel and electric
- Refinery-grade heat exchangers
- Cooling towers – capable of cooling millions of litres of water per minute

Aggreko News Release

April 29, 2014

- Winterized packaging options - ensuring seamless operations of equipment in harsh weather conditions

Aggreko's new facility is open for business and located at 225A Chemin des Iles, Levis, Quebec City.

EDITOR'S NOTES

Aggreko plc is the world leader in the supply of temporary power and temperature control solutions. Aggreko employs over 5,700 people operating from 194 locations. In 2012 we served customers in about 100 countries, and had revenues of approximately GBP 1.6bn (USD 2.5bn or Euros 2.0bn). Aggreko plc is listed on the London Stock Exchange (AGK.L), is a member of the FTSE-100 index, and is headquartered in Scotland. For more information, please visit the company website at www.aggreko.com

Aggreko provides power and temperature control solutions to customers who need them either very quickly, or for a short or indeterminate length of time. Examples would be the supply of power to an industrial site which needs to service its permanent power supply, supplying a whole city in times of power shortage, or providing a major sporting event with power and cooling systems. We serve our customers either through our 194 service centers, which we call the Local business, or globally through our Power Projects business.

In the Local business, which accounts for about half of our revenues, we hire our equipment to customers, who then operate it for themselves, although we retain responsibility for servicing and maintaining it. In the Power Projects business, which also accounts for about half of our revenues, we operate as a power producer. We install and operate [power plants](#) and we charge our customers both for providing the generating capacity, and for the electricity we produce. We design and manufacture equipment specifically for these requirements in our factory in Dumbarton, Scotland.

Recent customers include the [London 2012 Olympic and Paralympic Games](#), the [Vancouver 2010 Olympic Winter Games](#) and the power utilities in over 50 countries including the UK, France, Angola, Kenya, Indonesia, Bangladesh, Venezuela, Chile, Brazil and the USA.

In 2012 we fulfilled almost 45,000 customers' assignments and 70% of those who responded to our research gave us a recommendation of 9 or 10 out of 10.
